PROFESSIONAL SUMMARY

Backend Engineer with 2+ years of hands-on experience in Node.js, Python, and PostgreSQL, operating with full autonomy across remote and asynchronous environments. Proven track record of independent project ownership: designed secure JWT/RBAC frameworks, built live ML threat pipelines, and cut API latency by 73% with zero micro-management. Expert in structured written documentation and cross-timezone collaboration.

EDUCATION

National University of Computer and Emerging Sciences (NUCES)

Bachelor of Cybersecurity

Islamabad, Pakistan

2023 – 2027 (*Expected*)

- Relevant Coursework: Operating Systems, Database Systems, Computer Networks, Secure Software Design

EXPERIENCE

Backend Engineer (Remote, Full-Time)

QUEM SYSTEMS INTERNATIONAL

May 2026 – Present

Islamabad, Pakistan

- Architected a Redis-based caching layer independently, reducing database read load by **45%** and cutting p95 response times by **160ms** — designed and shipped asynchronously with zero real-time supervision.
- Containerized all backend microservices using Docker, standardizing environment parity across a distributed team and reducing onboarding setup times from **4 hours to 10 minutes**.
- Extended RBAC middleware to enforce subscription guards on **42** endpoints, independently fixing a critical privilege gap and detailing the resolution via a structured documentation write-up on Notion/GitHub.
- Delivered **14+** high-priority features across **4** development sprints entirely async, driving progress across PKT and EST time zones through clean documentation, explicit Slack updates, and thorough PR reviews.

Backend Engineer Intern (Remote)

QUEM SYSTEMS INTERNATIONAL

March 2026 – May 2026

Islamabad, Pakistan

- Slashed backend API response time from ~450ms to under 120ms (**73% reduction**) by rewriting legacy N+1 MySQL queries and generating optimal composite indexes via Prisma ORM independently.
- Engineered a 4-tier security framework (HS256 JWT) securing 113 routes across user, admin, and subscription roles with bulletproof cookie isolation and account-state verification.
- Accelerated admin dashboard workflows by batching 17 queries via **Promise.all**, mitigating UI blocking to render user metrics and multi-platform social data in one unified network round-trip.
- Implemented an Axios interceptor managing silent JWT rotation; self-documented the architecture to enable seamless async integration for frontend developers without needing synchronous meetings.

PROJECTS

IoT Rogue Traffic Detection Simulator | *Python, MQTT, Scikit-learn, Streamlit*

Nov 2025

- Built an end-to-end MQTT ingestion pipeline autonomously, ingesting real-time packet metadata across 20+ simulated IoT points with clean, production-grade documentation.
- Trained a Random Forest model on 350K+ data entries, achieving **95%+ accuracy** against anomaly patterns; optimized classification overhead to lower system threat processing latency to under **300ms**.
- Reduced mean detection-to-alert latency from 5 minutes to **15 seconds** using Streamlit live dashboards with automated threshold breach alerts.

SKILLS & TOOLS STACK

Core Technical Stack: Node.js (Express), Python, SQL (PostgreSQL, MySQL), Redis, Prisma ORM, REST APIs, JWT/RBAC

Remote Work Engine: Async Communication, Structured Technical Documentation, Independent Task Ownership, Self-Managed Sprint Execution

Collaboration Tools: Slack, Notion, Jira, Git/GitHub, Zoom, Teams, Postman, Docker
